EXPERIENCE

Modelmouse

Toronto, ON

Founding Software Engineer

Jan. 2025 – Present

- Architected the AI platform using AWS, FastAPI, PostgreSQL, Redis, and Snowflake, enabling AI user personas through a LangChain pipeline with LLMs and RAG
- Planned for horizontal scale using round-robin load balancing for Docker deployments, successfully load-testing 1500+ concurrent connections with Locust, and achieving P95 latency under 350ms
- Engineered an ETL pipeline ingesting 10M+ behavioral event streams from Snowflake, transforming data over stages such as compression and semantic clustering, with schema validation for consistency
- Measured 79% AI prediction accuracy by designing an eval harness and validating against human data
- Owned technical relationships with clients end-to-end by leading demos, guiding API integration, and monitoring our production systems

Sentia

Toronto, ON

Software Engineer

Jul. 2024 – Dec. 2024

- Maintained Sentia data storage platform on Azure and Node.js for 50+ global enterprise clients
- Redesigned backup pipeline using chunk-based SHA-256 deduplication prior to Azure Blob Storage writes, lowering storage volume by 23% and saving ~\$35k/year in cloud costs
- Managed Kubernetes clusters in production, including diagnosing pod logs to identify resource exhaustion and scaling node pools to restore service availability
- Wrote Azure CLI scripts to provision cloud infrastructure with guidance from senior engineers

Software Engineer Co-op

Jan. 2023 – Aug. 2023

- Developed an LLM support assistant using Node.js and OpenAI, reducing support ticket volume by 10%
- Integrated OpenTelemetry tracing and metrics, reducing engineering time spent diagnosing crashes

Sheertex

Montreal, QC

Software Developer Co-op

May 2022 – Jul. 2022

- Engineered a QA pipeline with machine vision using Python and PyTorch, enabling automated defect detection at 96.7% accuracy for manufactured goods to reduce QA time by 75%

PROJECTS

Vis-jit NPM Package | JavaScript

2026

- Authored npm module “vis-jit” with JavaScript, for tracing and visualizing Node.js JIT optimizations, such as type inference, inline caching, and compiler IRs, currently serving 400+ weekly active downloads

Waterloo Rocketry: Rocket Tracking Software | C++

2024

- Developed embedded C++ software for GPS radio telemetry, with checksum validation of incoming bytes for fault tolerance, allowing operation with up to 50% malformed byte frames

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, C, C++

Frameworks/Libraries: Node.js, FastAPI, Flask, PyTorch, LangChain, pytest, pandas, NumPy, OpenTelemetry

Tools/Infrastructure: Nginx, Linux, Docker, Kubernetes, Git, CI/CD, IaC, Azure, AWS

Databases: SQLite, PostgreSQL, Redis, Snowflake

EDUCATION

University of Waterloo

Waterloo, ON

BASc in Mechatronics Engineering and Computing (GPA: 3.7/4.0)

Jun. 2024

- Coursework: Operating Systems, Algorithms, GPU Programming, Pattern Recognition, Intro to AI
